Exercise 16 – Create a Library

Objective

By the end of this exercise, you will be able to create a Library of Reusable TestStepBlocks.

Why is this important?

A Library greatly reduces the amount of work needed to create the multiple TestCases needed to fully automate TestCases.

Instructions

1. Within the folder "3 – In Work", create a TestStepLibrary.

2. Drag and drop all folders from the TestCase created in Ex. 15 to the newly created TestStepLibrary.

3. Save your work.

Hints

» Library Folders are sorted alphabetically automatically.

» Make sure to drag and drop the individual folders that contain TestSteps and not the parent folder(s).

Cheat Sheet

Term	Description	Example
TestStepLibrary	You can create a Library in which you can store TestSteps. The benefit is that whenever you want to use and reuse these TestSteps later on, you can simply drag and drop where you need them. In Tosca, this Library is called a TestStepLibrary.	
Reusable TestStepBlocks	The steps inside the Library that you can reuse are called Reusable TestStepBlocks.
