EXECUTION SECTION

EXECUTION SECTION

Exercise 21 – Create and Execute ExecutionLists

Objective

By the end of this exercise, you will be able to create an ExecutionList.

Why is this important?

Running TestCases in the Execution section gives you a better oversight of your tests.

Instructions

1.	In the **Execution** Section, navigate to **Execution**>>**ExecutionLists**. Create an ExecutionList Folder and name it "Exercise 21 - Create an ExecutionList".
2.	Create a new ExecutionList and name it "Web Shop".
3.	In the **TestCases** Section, confirm that all TestCases are completed and that all Business Parameters are entered where needed.
4.	Drag and drop the TestCases with the TestCase WorkState **COMPLETED** (exercises 13, 15 and 20) into the ExecutionList "Web Shop".
5.	Run the ExecutionList.
6	Save your work.

Cheat Sheet

Term	Description	Example
ExecutionList	ExecutionLists do the important job of running the TestCases and storing the results for the executed TestCases. Unlike the ScratchBook, the ExecutionLists store all historic results, which can be consulted if necessary.
